

The benefits of smart thermostats

Designed to offer comfort, energy savings and ease of use, the Netatmo Smart Thermostat is revolutionising your home heating management. It can be wired or wireless, depending on your preferences, and installation is quick and does not require any technical skills.

The Thermostat reduces your energy consumption by automatically adjusting the temperature to suit your routine. With this intelligent technology, users can make substantial savings on their heating bills.

The Netatmo Smart Thermostat also enables you to control the temperature of your apartment directly from your smartphone, tablet or computer, offering unrivalled flexibility and maximum comfort at all times.

What's more, its Auto-Adapt feature takes into account the outside temperature and your insulation, to maintain the ideal temperature. This way, users can enjoy personalised comfort, tailored to their specific needs.

The Netatmo Thermostat is compatible with Apple HomeKit, Google Home and Amazon Alexa, making it easy to integrate into the smart home. This compatibility also ensures centralised, simplified management of all your smart devices.

Netatmo & Enode

Enode, a specialist in API integration solutions, and Netatmo, a leading smart home company, announced a new strategic partnership this summer. With an API provided by Enode, Netatmo users can now instantly link their smart thermostats and radiator valves to a wide range of third-party apps, including apps from energy suppliers and other home energy management tools.

This gives users more flexibility, as they can choose the app that suits them best for monitoring, managing and optimising their heating systems.

By enabling access to their devices and data, Netatmo promotes an approach focused on the interoperability of its products, enhancing the entire energy ecosystem and giving users more quality options for managing energy in their homes.

The aim of this partnership is to help customers extract even more value from their heating appliances by centralising home energy management while continuing to reduce their consumption and associated costs.

‘The partnership with Enode gives our customers greater control over the management of their energy use,’ said Alexandre Menu, General Manager of Netatmo. ‘Instead of being limited to a single app, our users now have total freedom in how they interact with and control their heating systems. This not only gives them more choice and control over their home comfort and heating expenses, but also their contribution to the energy transition.’ Other Netatmo products are currently being integrated with Enode, so stay tuned!
